Question **1**Correct
Marked out of

 Create a class Mobile with constructor and a method basicMobile().

Create a subclass CameraMobile which extends Mobile class , with constructor and a method newFeature().

Create a subclass AndroidMobile which extends CameraMobile, with constructor and a method androidMobile().

display the details of the Android Mobile class by creating the instance.

class Mobile{

} class CameraMobile extends Mobile {
} class AndroidMobile extends CameraMobile {
} expected output:
Basic Mobile is Manufactured

Camera Mobile is Manufactured
Android Mobile is Manufactured
Camera Mobile with 5MG px
Touch Screen Mobile is Manufactured

For example:

Result

Basic Mobile is Manufactured Camena Mobile is Manufactured Android Mobile is Manufactured Camera Mobile with 5MG px Touch Screen Mobile is Manufactured

Answer: (penalty regime: 0 %)

```
1 - class mob{
        mob(){
            System.out.println("Basic Mobile is Manufactured");
        void basmob(){
             System.out.println("Basic Mobile is Manufactured");
    class cam extends mob{
10
        cam(){
11
             super();
            System.out.println("Camera Mobile is Manufactured");
12
13
14
         void newm(){
15
            System.out.println("Camera Mobile with 5MG px");
16
17
19
    class and extends cam{
20
        and(){
21
        System.out.println("Android Mobile is Manufactured");
22
23
        void andmob(){
24
            System.out.println("Touch Screen Mobile is Manufactured");
25
26
27
     public class Main{
        public static void main(String[]args){
    and andmob=new and();
29
30
31
            andmob.newm();
            andmob.andmob();
32
33
34
36
```

Expected	Got	
Basic Mobile is Manufactured	Basic Mobile is Manufactured	
Camera Mobile is Manufactured	Camera Mobile is Manufactured	
Android Mobile is Manufactured	Android Mobile is Manufactured	
Camera Mobile with 5MG px	Camera Mobile with 5MG px	
Touch Screen Mobile is Manufactur	ed Touch Screen Mobile is Manufactured	

Passed all tests!

Question **2**Correct

```
College:
String collegeName;
public College() { }
public admitted() { }
Student:
String studentName;
String department;
public Student(String collegeName, String studentName,String depart) { }
public toString()
Expected Output:
A student admitted in REC
CollegeName : REC
StudentName : Venkatesh
Department : CSE
For example:
```

Result

A student admitted in REC
CollegeName : REC
StudentName : Venkatesh
Department : CSE

Answer: (penalty regime: 0 %)

```

Question **3**Correct

Marked out of 5.00

Flag question

 $\label{lem:count} \textbf{Create a class known as "BankAccount" with methods called deposit() and withdraw().}$

Create a subclass called SavingsAccount that overrides the withdraw() method to prevent withdrawals if the account balance falls below one hundred.

For example:

Result

```
Create a Bank Account object (A/c No. BA1234) with initial balance of $500:
Deposit $1000 into account BA1234:
New balance after depositing $1000: $1500.0
Withdraw $600 from account BA1234:
New balance after withdrawing $600: $990.0
Create a SavingsAccount object (A/c No. SA1000) with initial balance of $300:
Try to withdraw $250 from SA1000!
Minimum balance of $100 required!
Balance after trying to withdraw $250: $300.0
```

Answer: (penalty regime: 0 %)

```
Reset answer
 1 v class BankAccount {
2  // Private field to store the account number
             private String accountNumber;
  4
             // Private field to store the balance
  6
             private double balance;
             // Constructor to initialize account number and balance
             public BankAccount(String accountNumber,double balance){
    this.accountNumber=accountNumber;
 10
 11
                  this.balance=balance;
 12
 13
 14
 15
 16
17
             // Method to deposit an amount into the account
             public void deposit(double amount) {
    // Increase the balance by the deposit amount
 19
 20
              balance+=amount;
 21
 22
            // Method to withdraw an amount from the account
public void withdraw(double amount) {
    // Check if the balance is sufficient for the withdrawal
    if (balance >= amount) {
        // Decrease the balance by the withdrawal amount
        palance -= amount;
}
 23
 24
 25
 26
27
 28
                         balance -= amount;
